

ServiceNow – Employee Center Application Setup

Step-by-step guide for creating the Employee Center application in ServiceNow Studio

1 Open All Menus

From the ServiceNow navigation, select **All** and open **App Engine** → **ServiceNow Studio**.

2 Create a New Application

In ServiceNow Studio, click the **Create** button and select **App** to create a new application.

3 Enter Application Details

Name: Employee Center

Scope: Scoped

4 Continue

Click **Continue** to create the application.

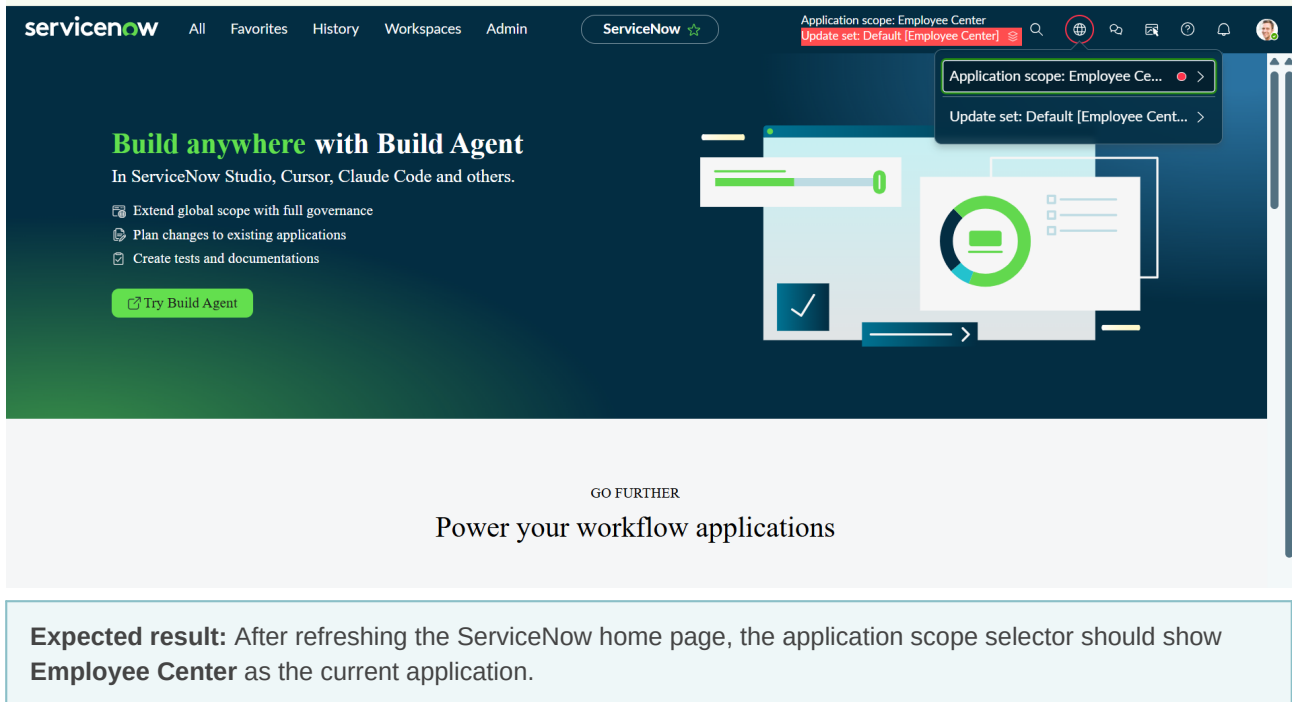

5 Return to Home

Go back to the ServiceNow home page and **reload/refresh** the page.

6 Verify the Current Application

After reloading, **Employee Center** should appear as the current application in the application scope selector.

Reference Screenshot

The screenshot shows the ServiceNow home page. The top navigation bar includes 'All', 'Favorites', 'History', 'Workspaces', and 'Admin'. The 'ServiceNow' logo is on the left, and the 'Application scope: Employee Center' dropdown is on the right. The main content area features a 'Build anywhere with Build Agent' section with a 'Try Build Agent' button. Below this, a 'GO FURTHER' section is titled 'Power your workflow applications'. A light blue box at the bottom contains the 'Expected result' text.

Expected result: After refreshing the ServiceNow home page, the application scope selector should show **Employee Center** as the current application.
