Problem–Solution Fit Statement

Employees need a simple and consistent way to report IT or workplace-related issues. When issue details are submitted through informal or unstructured channels, important information can be missed and categories may be selected inconsistently. The Employee Raise Issue Management System addresses this need through a dedicated ServiceNow portal, a structured Record Producer form, validation rules, and a custom table that stores each submitted issue for follow-up.

1. CUSTOMER SEGMENTS Employees who use the organization's Service Portal and need to report an IT or workplace issue.	**2. CUSTOMER CONSTRAINTS** Employees may be unsure where to report an issue, which category to choose, or what details are required.	**3. AVAILABLE SOLUTIONS** A ServiceNow Record Producer, custom issue table, UI Policies, dependent category/subcategory choices, and portal widgets.
4. JOBS TO BE DONE / PROBLEMS Report an issue in one place, describe it clearly, select the appropriate category and subcategory, and submit it for processing.	**5. PROBLEM ROOT CAUSE** Issue reporting can be inconsistent when there is no standard form, required information is omitted, or category choices are unclear.	**6. EMPLOYEE BEHAVIOUR** An employee opens the portal, selects "Raise an Issue," enters the requested details, chooses category/subcategory, and submits the form.
7. TRIGGERS An employee experiences a technical or workplace problem and needs assistance from the relevant support team.	**8. BEFORE / AFTER** Before: details may be reported inconsistently. After: a structured form captures the issue details and creates a record in ServiceNow.	**9. OUR SOLUTION** A dedicated Employee Raise Issue experience in ServiceNow. The "Raise Ticket" widget opens the Record Producer, which maps the submitted values to the custom issue table. UI Policies and dependent choices help standardize data entry.

10. CHANNELS

Employees access the Employee Center / Service Portal, view the Raise an Issue widget, click "Raise Ticket," and complete the Record Producer form.

11. CUSTOMER VALUE

The solution offers a consistent submission process, clearer issue details, more controlled category selection, and a stored ServiceNow record that support staff can use for follow-up.

Conclusion

The solution fits the identified employee need by providing a dedicated and structured way to raise issues. The completed implementation includes portal widgets, a Record Producer, a custom issue table, field validation, and category/subcategory configuration. Automated notifications, SLA tracking, and dashboards are future enhancements, not features claimed as completed.
