PROJECT DESIGN PHASE
PROPOSED SOLUTION

Date	22 October 2026
Team ID	N/A — Individual Project
Project Name	Employee Raise Issue Management System
Maximum Marks	2 Marks

Proposed Solution Template

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Employees need a simple, consistent way to report IT or workplace-related issues. Informal or unstructured reporting can omit important details and lead to inconsistent category selection, making requests harder to understand and follow up.
2	Idea / Solution description	The Employee Raise Issue Management System uses a ServiceNow portal widget and Record Producer to collect requester details, category, subcategory, issue state, and issue description. Submitted information is mapped to a custom Employee Raise Issue table. UI Policies and category/subcategory configuration help guide and validate data entry.
3	Novelty / Uniqueness	The project brings a dedicated “Raise Ticket” widget, Record Producer, custom table, UI Policies, and category/subcategory selection into one employee-facing workflow within ServiceNow. This provides a standardized reporting route rather than relying only on informal messages.
4	Social Impact / Customer Satisfaction	Employees have a clear, structured way to submit issues, and support staff receive consistent information stored as a ServiceNow record. This can reduce confusion and improve the reporting experience; actual resolution time still depends on the support process.
5	Business Model (Revenue Model)	This is an internal enterprise service-management solution, not a direct revenue-generating product. Its indirect business value may include less manual clarification, more consistent records, and more organized issue handling. No paid or external revenue model is implemented.
6	Scalability of the Solution	The solution can be expanded with additional categories, fields, role-based access, assignment rules, notifications, reports, and dashboards. These are possible future enhancements; automated notifications, SLA tracking, and dashboards are not claimed as implemented.

Implementation note: The document describes implemented functionality and identifies additional capabilities as future enhancements.
