# PROJECT PLANNING PHASE
# PRODUCT BACKLOG, SPRINT PLANNING, STORIES & ESTIMATION

| | |
|---|---|
| **Date** | 22 October 2026 |
| **Team ID** | N/A — Individual Project |
| **Project Name** | Employee Raise Issue Management System |
| **Maximum Marks** | 5 Marks |

## 1. Product Backlog, Sprint Schedule, and Estimation (4 Marks)

The backlog below organizes the implemented Employee Raise Issue project into manageable work items. Story points are estimates for relative effort, not measured historical velocity. Sprint labels and durations are proposed planning values because exact historical sprint dates were not provided.

| Sprint | Functional Requirement (Epic) | User Story No. | User Story / Task | Story Points | Priority | Team Members |
|---|---|---|---|---|---|---|
| Sprint 1 | Data Model & Fields | US-1 | As an administrator, I can create a custom Employee Raise Issue table with fields for requester, category, subcategory, state, priority, assignment group, short description, and issue number. | 3 | High | Individual |
| Sprint 1 | Data Model & Fields | US-2 | As an administrator, I can configure issue-number generation and field settings so each issue can be identified and maintained consistently. | 2 | High | Individual |
| Sprint 1 | Validation & Choices | US-3 | As an administrator, I can configure UI Policies so the short description is mandatory when the state is New and the issue number is read-only. | 3 | High | Individual |
| Sprint 1 | Validation & Choices | US-4 | As an employee, I can choose a category and an associated subcategory to describe my issue consistently. | 3 | High | Individual |
| Sprint 2 | Issue Submission | US-5 | As an employee, I can open the Raise an Employee Issue Record Producer and enter requester, category, subcategory, state, and issue details. | 3 | High | Individual |
| Sprint 2 | Issue Submission | US-6 | As an employee, I can submit the form and create a record in the custom Employee Raise Issue table. | 3 | High | Individual |
| Sprint 2 | Portal Experience | US-7 | As an employee, I can use the Raise Ticket widget on the Employee Center / Service Portal page to navigate to the Record Producer. | 3 | High | Individual |
| Sprint 2 | Testing & Validation | US-8 | As a project owner, I can test issue submission and verify that the record is created and configured field behavior works as expected. | 2 | High | Individual |

## 2. Project Tracker, Velocity & Burndown Chart (4 Marks)

The sprint tracker below is a planning example, not a record of actual historical sprint performance. Update the completed story points and release dates with actual values if your submission requires them.

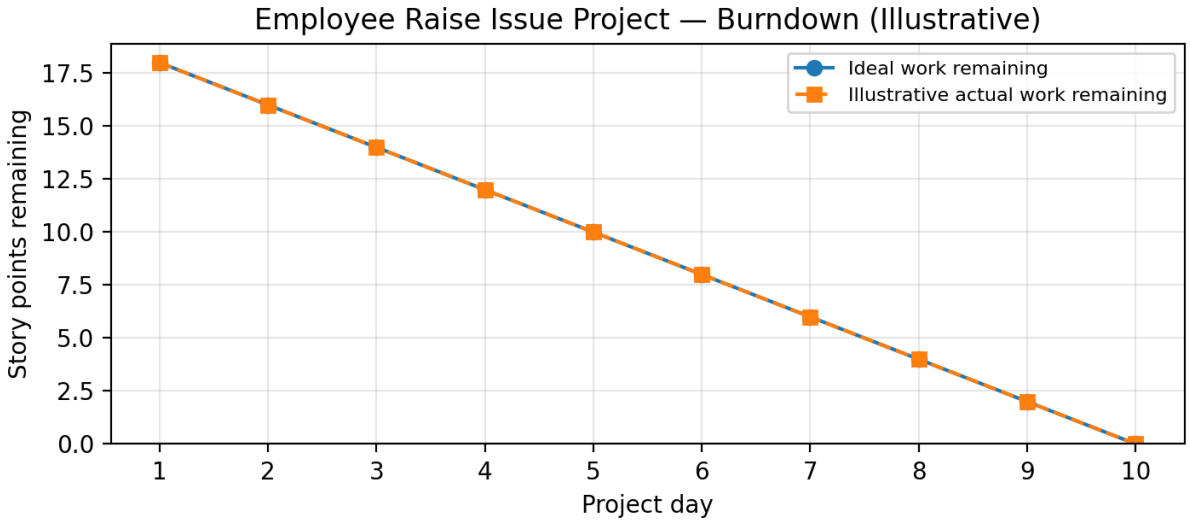

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (Planned End) | Sprint Release Date (Actual) |
|---|---|---|---|---|---|---|
| Sprint 1 | 11 | 6 days | Proposed Day 1 | Proposed Day 6 | 11 (target) | Not recorded |
| Sprint 2 | 11 | 6 days | Proposed Day 7 | Proposed Day 12 | 11 (target) | Not recorded |
| | | | | | | |
| | | | | | | |

### Velocity

The reference template demonstrates average velocity as story points divided by sprint duration. Using the illustrative example of 20 story points over 10 days: average velocity = 20 ÷ 10 = 2 story points per day. For this individual project, actual velocity cannot be calculated reliably without actual sprint duration and completed-point data.

### Burndown Chart

A burndown chart shows remaining work over time. The chart below is illustrative only and assumes 18 points of work reaching zero by project day 10; replace it with actual daily remaining-work values if available.
